Bruno Oliveira

Software Developer at Software Improvement Group (SIG)
Amsterdam

Summary

Check my technical blog posts: <https://dev.to/brunooliveira>

My blog on code quality: <https://bruno-oliveira.github.io/quality-software/>

Experience

Software Improvement Group (SIG)

2 years 4 months

Software Engineer

February 2021 - Present (7 months)

Amsterdam, North Holland, Netherlands

- Developed a custom CI integration using Docker, Testcontainers, Airflow, and Python to allow our customers to integrate Sigrid into their pipelines to ensure code quality on every commit. Worked end-to-end from the database design to the Airflow Python DAGs as well as the Java integration tests to ensure the correctness of the overall solution.

- Developed a standalone service packaged as a Docker image to compute the SIG quality ratings for a code delta: Leveraged the SIG code graph model to operate only on changed or new code.

- Provided support for leveraging CDK8s as the means of using Kubernetes to spin up ephemeral test environments to test changes functionally.

- Maintaining the CI/CD pipeline running and healthy, extending it when necessary.

- Working a lot on technical internal documentation to document technical solutions as well as onboarding new team members.

- Allowed SIG to run partial code analysis on-site for customers who could not disclose their source code outside of their premises. Did this by ensuring that

a suitable Serialization/Deserialization Java process was in place by using Jackson's custom serializers and deserializers.

Junior Software Developer

May 2019 - February 2021 (1 year 10 months)

Amsterdam Area, Netherlands

Working as a full-stack developer using Java, Spring, Maven

Anju Software

Software Engineer

November 2018 - April 2019 (6 months)

Antwerp Area, Belgium

Working in the development of web applications to be part of the large ecosystem at Anju Software.

Working both with designers for front-end related development, as well as on the data integration and back-end sides of the application, both providing data for visualizations, as well as fixing data query issues among other tasks.

- Wrote standalone applications like a semantic search style application that worked on tablets so it could be showcased to researchers and doctors in conferences like SCOPE.

- Revamped old applications by enhancing their functionalities and working with designers to redesign the UI and layout.

- Extended an engine to create reports that could be shown on a webpage or downloaded to PDF by leveraging a dynamic composition system developed in-house.

MDCPartners

Software Engineer

September 2016 - November 2018 (2 years 3 months)

Antwerp Area, Belgium

Working as an application developer, with a focus on the front-end part of the web application architecture. Keeping in touch with the data analysts in order to provide the best data insights on the front-end of complex and specialized web applications in the health sector.

Glintt

Beginner Consultant

December 2015 - June 2016 (7 months)

INESC-ID

Summer Intern

July 2015 - November 2015 (5 months)

Working on the development of technological support for a platform for Support and Analysis of DELPHI studies. Part of the MSc thesis of a student.

Directi

Problem Setter and Editorialist

December 2012 - September 2015 (2 years 10 months)

I am currently working on the non-profit initiative Codechef from Directi, which aims to be a leader platform in the teaching and divulgation of Algorithms for students who want to enroll on CS courses or have an interest in things algorithmically!

This work so far as allowed me to develop both my Algorithmic thinking and designing skills and, on the other hand, introduced me to what its like working integrated in a team and what its like to have deadlines to fullfill.

Although it's only a work of collaboration via e-mail and via the codechef website I consider it very valuable to my own professional development.

Infosistema

Summer Intern

July 2014 - September 2014 (3 months)

Miraflares, Lisboa

Intern at Infosistema, where I performed activities for several departments and used several agile technologies.

Wrote User Manuals to be used by some client companies (namely, a bank)

Education

Instituto Superior Técnico

Bachelor's Degree, Computer Engineering · (2012 - 2016)
